FOREWORD

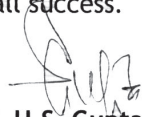

Herbarium Cryptogamae Indiae Orientalis (HCIO) a National fungal herbarium in the Division of Plant Pathology, IARI, New Delhi, was established by Sir. **Edwin John Butler** at Pusa, Bihar in 1905 and later on shifted to Division of Mycology and plant Pathology, Indian Agricultural Research Institute in 1934. For the past more than 76 years this national facility for the conservation of fungal biodiversity is being maintained.

HCIO, the show window of the institute, has played an important role in conserving fungal biodiversity by collection, accession, identification and maintenance of fungal disease specimens since 1905 to till date. Out of 1.5 million fungi, only 5 - 10% fungi can be cultured artificially and the biotrophs which are not amenable to culture media go unnoticed. Since, one third of global biodiversity of biotrophic fungi is in India, the role of HCIO is highly important to preserve the biodiversity of biotrophic fungi in the form of specimens.

At present, the fungal herbarium, HCIO is enriched with more than 49,000 fungal diseased specimens, comprising nearly 2000 genera of various groups of fungi includes Myxomycetes, Mastigomycetes, Zygomycetes, Ascomycetes, Basidiomycetes and Deuteromycetes. The collection also includes the types of more than 3500 new specimens. Every year nearly 500-600 specimens of different groups of fungi are being received from various parts of country and also from other countries for accession. Fungal specimens house in HCIO represents the fungal biodiversity of our country and will give valuable source of information for taxonomic characterization of fungi.

This catalogue is the First edition of fungal specimen in HCIO, comprising specimen data for approximately 5000 diseased fungal specimens, which includes 413 genera and 1432 species of different groups of fungi with host index. I would like to congratulate Dr. C. Uma Maheswari and her team for bringing out this publication. I wish them all success.

March 15, 2012

(H.S. Gupta)

Glimpses of Herbarium Cryptogamae Indiae Orientalis (HCIO)

History

The foundation of Herbarium Cryptogamae Indiae Orientalis (HCIO), a national fungal herbarium facility was laid down by Sir Edwin John Butler at Pusa, Bihar in 1905. After disastrous earthquake the Pusa, Bihar the HCIO was shifted to the Division of Mycology and Plant Pathology, IARI, New Delhi in 1934. Ever since its inception in 1905, the HCIO continued with the identification, classification and conservation of fungal specimens.

Main objectives and activities of HCIO

1. Collection, identification and conservation of fungal specimens
2. Providing national identification service to scientists and research scholars
3. Description of new genera and species of fungi in India.
4. Taxonomic characterization of different groups of fungal specimens
5. Documentation of fungal herbarium specimens
6. Compilation of fungi of India

Role of HCIO in enrichment of biodiversity of fungi

Systematic work on Mycology in India was initiated by Sir E.J. Butler in 1901, who is regarded as the "Father of Indian Mycology". Based on his collections, the HCIO was established in 1905. At present, more than 49,000 diseased fungal specimens comprising of different groups of fungi are being maintained and preserved in their natural form. HCIO has highest collection of Indian (8) and foreign (180) exsiccate sets besides the oldest specimens of rust and smut. **It has richest collections of rusts, smuts, powdery mildews and meliolales fungi and also more than 3500 "Type specimens"**. Taxonomic works on rusts, smuts, powdery mildews, Coelomycetous and Hyphomycetes fungi were also carried out in HCIO resulted in description of approximately 570 new species and 19 genera from HCIO. Sarbhoy and Agarwal gave authentic description and distribution map of 102 tropical plant pathogenic fungi in India in the form of HCIO sets. Dr. Sarbhoy and his associates published seven supplements of "Fungi of India".

Preservation and maintenance of fungal herbarium specimens

Dry preservation and liquid preservation are the two methods commonly adopted to preserve specimens for long period. Drying of specimens is the process of dehydration. In this method, specimens are dried properly and mounted on herbarium sheets. The specimens are labelled with data which includes a unique HCIO accession number of the specimen, scientific name of the fungus with taxonomic authority, locality of collection, habitate/ name of the host, name and of the collector and depositor. The mounted specimen sheets are sorted first based on the genus and then different species in each genus are sorted out and stored in almirahs. Formaldehyde-alcohol solution is used for liquid preservation.

Identification service

The fungal diseased specimens should be properly dried and to be sent for identification. The rates for identification of specimens are Rs. 1000.00 specimen for Government /Non Commercial Organization and Rs. 8000.00 per specimen for Commercial Organizations. An advance payment for identification service can be made by cash or through demand draft in favour of “ICAR, Unit IARI” payable at New Delhi.

Accession of fungal diseased specimens

Identified specimens can be sent for accession. The HCIO accession number will be allotted to the specimens and the accession report will be sent within one month after receipt of specimens. It is necessary to mention this HCIO numbers in publication. The details as per Annexure 1 should be furnished along with specimens for accession. Microscopic slides can also be accessioned in herbarium.

Cataloguing of fungal specimens at HCIO

A list of fungal names are arranged in alphabetical order. The specimen data in this catalogue includes name of the fungi, name of the host or substrate, date of collection, name of the collector and a unique HCIO accession numbers of the specimens. We have taken efforts to catalogue 5000 specimens with host index which were accessioned in HCIO for the past 10-12 years and the efforts will be continued for cataloguing of remaining specimens of HCIO.

Acknowledgements

The authors are thankful to Dr. H.S. Gupta, the Director and Dr. Malavika Dadlani, the Joint Director (Research), IARI, New Delhi for providing necessary facilities to maintain the national facility to conserve the biodiversity of fungi and render services to various Institutes and Universities for identification and accession of the fungal specimens. We express our gratitude to Prof. H.S. Gaur, the Dean and Joint Director (Education), IARI for the financial support. Our heartfelt thanks are due to Dr. R.K. Jain, Head, Division of Plant Pathology who has provided sustained support and a main steering and guiding force to initiate the work of cataloguing the specimens available in HCIO. Authors are also thankful to Dr. Pratibha Sharma, Professor, Division of Plant Pathology for her continuous encouragement and financial support to publish this catalogue. Sincere thanks are also due to senior Mycologist Dr. D.K. Agarwal for his valuable suggestions and critical corrections made in the catalogue. We thank our technical personnel Sh. Muhar Singh and Dr. Nita Mathur for their help.

Fungal Specimens in Herbarium Crytogamae Indiae Orientalis (HCIO)

***Acaulopage dichotoma* Drechsler**

On *Myrsine semiserrata*, Niglat, Nainital, S.C.Sati, Aug 1988, HCIO 44897

***Acaulopage tetraceros* Drechsler**

Pond water, Bhubaneshwar, C.Manoharachary, Jun 2006, HCIO 47782

***Acaulospora bireticulata* Rothwell & Trappe**

On *Catharanthus pusillus*, Osmania University, Hyderabad, C.Manoharachary, Oct 2005, HCIO 47747

***Acaulospora foveata* Trappe & Janos**

On *Holarrhena pubescens*, Osmania University, Hyderabad, C.Manoharachary, Oct 2005, HCIO 47748

***Acaulospora scrobiculata* Trappe.**

On *Catharanthus pusillus*, Osmania University, Hyderabad, C.Manoharachary, Oct 2005, HCIO 47749

***Acaulospora terricola* Swarupa, Kunwar & Manohar.**

Soil of *Vallaris solanacea*, Hyderabad, C.Monoharachry, Jun 2002, HCIO 44418

***Achlya debaryana* Humphrey**

Pond water & mud, Haridwar, C. Manoharachary, Jun 2006, HCIO 47783

Annexure -I

Proforma for Accession of Fungal Specimens

1. Name of the fungus with authority :
2. Stage of fungus (Anamorph / Teliomorph) :
3. Detail of fungus (Pathogenic/ Saprophyte/ Mycoparasite etc.) :
If pathogenic whether pathogenicity is proved or not
4. Name of the Host (Botanical and Local name) :
5. Type of specimens - Holotype / Lectotype etc :
6. Locality of collection :
7. Date of collection :
8. Name of the collector :
9. Name of the depositor :
10. Identification of fungus is done by :
11. Details of publication :
12. Address of the depositor with phone number and E- mail ID :

For New genus or species, the complete morphological description should be submitted.

Any changes in the above particulars, after receiving of HCIO accession numbers , should be communicated to us so that corresponding changes will be made in our records and specimens

ISBN: 978-81-88708-71-0
